

Mobile Folding Concertina Room Dividers Planning Sheet

We have created the following guide to assist you in working out the number of systems and panel configurations required to cover specific floor spaces

A. Using a “zig zag” configuration we recommend that two panels = 1m

B. Using units flat but angling the 2 outer panels (minimum requirement for stability)

Sample measurements using the configurations described above:

No of Panels	Configuration	Area Covered	No of Panels	Configuration	Area Covered
9 Panel	A	4.5 m	5 Panel	A	2.5 m
9 Panel	B	4.8 m	5 Panel	B	2.4 m
7 Panel	A	3.5 m	4 Panel	A	2.0 m
7 Panel	B	3.6 m	4 Panel	B	1.7 m

Please note Concertina Room Dividers are flexible and the above information has been created to assist you when ordering your goods. Once you have the units on site, you will be able to adjust your angles to suit your own requirements.
