

- 
- The diagram shows a vertical rectangular shape with a rounded top. It is defined by three concentric lines: an outermost red line representing the bleed area, a middle black line representing the finished product, and an innermost green line representing the safe working area. The safe working area is a rectangle with rounded corners, while the finished product and bleed areas have a flat base and rounded top.
- Have all fonts converted to paths.
 - At 100% artwork needs to be 72 DPI.
 - All artwork needs to be layered and not flattened.
