

# Vinyl Fitting Instructions

TOOLS - Tape measure, Application fluid (or a spray bottle with a drop of washing up fluid), Masking tape, Squeegee, Scalpel.

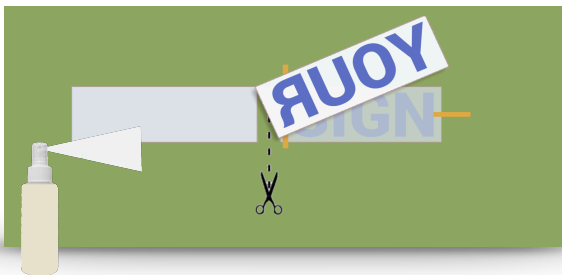

CLEANING - Use meths or glass cleaner to clean and dry the surface. Remove grease, dust and dirt to avoid bubbles and give good adhesion.

1

Measure and mark your sticker location. Hold the sticker in place using tape at either end and one through the centre as shown.

2

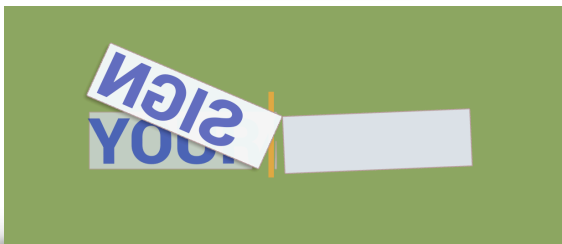

Using the centre tape as a hinge fold over half the graphic and careful peel the backing tape away. Next cut the backing paper off and spray a little application fluid onto the surface

3

Holding the sticker carefully away from the surface use the squeegee to smooth the sticker from the centre outwards. If creases or bubbles develop, carefully lift the graphic and re-squeegee it.

4

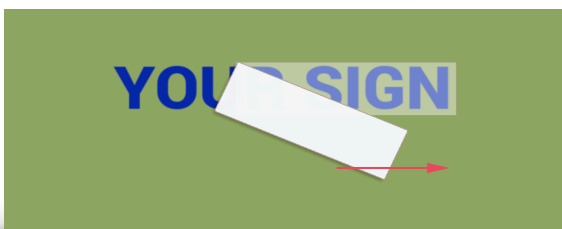

Repeat step 2

5

Repeat step 3

6

Allow the decal to dry then gently remove transfer tape starting in one corner. If any vinyl starts to lift use your squeegee to firmly press it back down
